

## About

The Sports Internal Control System (SICS) product by Elsym provides for the collection of sports wagering activity across multiple sports operators. It consolidates the data into a single reporting portal which allows for better oversight and management by the regulator. Additionally, the SICS manages the collection of ineligible players and self-exclusions to ensure all operators are notified and kept current with accurate information.

- Operators upload daily financial activity files and player self-exclusion data to the SICS
- SICS provides centralized reporting to the regulator including general ledger feed
- SICS provides ineligible player and self-exclusion data back to operators
- Web portal used to monitor and review all data collection and reports
- Automated event notification

## SICS Data Flow
